TOP 10 REASONS TO CHOOSE ANIMAL SCIENCES

1. Make a difference in your world by improving food production.
2. Prepare for graduate school, veterinary school, medical school, and rewarding careers.
3. Work with nationally recognized professors who conduct ground-breaking research.
4. Benefit from rewarding scholarships.
5. Gain hands-on experience with animals through courses, internships, research, and farm employment.
6. Graduate prepared to succeed in medicine, pharmacy, nursing, and other human health fields.
7. Study abroad working with exotic animals.
8. Develop industry connections.
9. Be equipped for multiple job offers and high starting salaries.
10. Improve the health of a wide variety of animals.

IMAGINE YOUR FUTURE IN ANIMAL SCIENCES
As an Animal Sciences major, you can customize your degree with one of three concentrations:

**COMPANION ANIMAL AND EQUINE SCIENCE**

Discover a career in industries outside of traditional meat animal or dairy production. Prepare for careers in specialized fields of animal care, health, and well-being associated with zoos, kennels, research laboratories, and the racing industry.

**SCIENCE, PRE-VETERINARY, AND MEDICAL**

Prepare for graduate school or professional training with this concentration that allows flexibility to choose courses that will satisfy most entrance requirements to post-graduate programs and emphasizes fundamental science courses.

**TECHNOLOGY AND MANAGEMENT**

Train for a career in animal care and management or one of the associated food production industries. This concentration emphasizes the scientific disciplines and the application of technology involved in animal production and animal products, and provides the opportunity to enhance practical knowledge through business courses.

**UNDERGRADUATE RESEARCH**

Interested in research? Our world-renowned faculty offer you the opportunity to experience scientific breakthroughs as you pursue your bachelor’s degree.

**INTERNSHIPS**

Nothing is more exciting than applying your knowledge outside of the classroom, and why not earn academic credit while you’re doing that? Our students complete internships throughout the year at animal shelters/rescues, production facilities, vet clinics, zoos, and more.

**STUDY ABROAD OPPORTUNITIES**

Live on the other side of the globe for a year, or spend winter break in the Caribbean. Our students travel to South Africa to observe exotic animals, work alongside large animal veterinarians in Greece, and even attend university abroad for a semester. A wide range of opportunities are available in addition to these submersive, hands-on experiences.

**JUDGING TEAMS**

Strengthen your reasoning and communication skills by joining a judging team. Students involved in dairy, horse, poultry, meats, or livestock judging visit leading operations across the country while deepening their understanding of animal agriculture.
